

## **HEARING CONSERVATION PROGRAM**

### **Purpose**

To ensure Company employees are provided with protection, training and information on the way they can recognize and prevent working in areas where sound levels are above 85 decibels (dBA) without proper ear protection. The Company is committed to providing a safe work environment for all employees. All employees will be tested for hearing levels prior to commencement of the project and again upon its completion.

### **OBJECTIVE**

To monitor all work areas where the continuous noise levels are at or above 85 decibels (dBA) and ensure that all employees are informed of those areas. While working in these areas, ear protection must be worn at all times. Monitoring shall be repeated whenever a change in process, equipment or controls increase noise levels or if changes are implemented to reduce the noise levels to a level where protection is no longer required.
