

FALL PROTECTION POLICY

Purpose: The safety of our employees is important to the company and will not be compromised. Fall Protection is an important aspect of our program to insure that people who work for us can continue to live safe and healthy lives.

Scope: We require all employees of this company and subcontracted employees who work at heights above 10 feet and over to be protected from falling. In some cases we will also implement fall protection at a lesser height if there is a danger or hazard in the area below.

A written fall protection plan will be developed and implemented when a fall hazard of 25 feet or more exists or when a safety monitor and control zone is required. The intent of the plan is to:

- (a) help prevent falls;
- (b) assist workers and supervisors to identify the fall hazards of the site before work begins at heights;
- (c) assist in the selection of an appropriate fall protection system(s);
- (d) assist in rescue procedures for someone if a fall should occur.
